The 'Request a filter adjustment' feature doesn't currently work. Please use the whitelist function which is explained below.

To white list an email address for yourself then click on Configuration -> White list.

Please input the email address into the Address box and a comment in the comment box.

Then click < Add the address.

If you want to whitelist every email address from a certain domain for example @bbc.co.uk then you would put an asterisk followed by the domain in the address field. For example *@bbc.co.uk
